Quiz Instructions

Question 1 15 pts

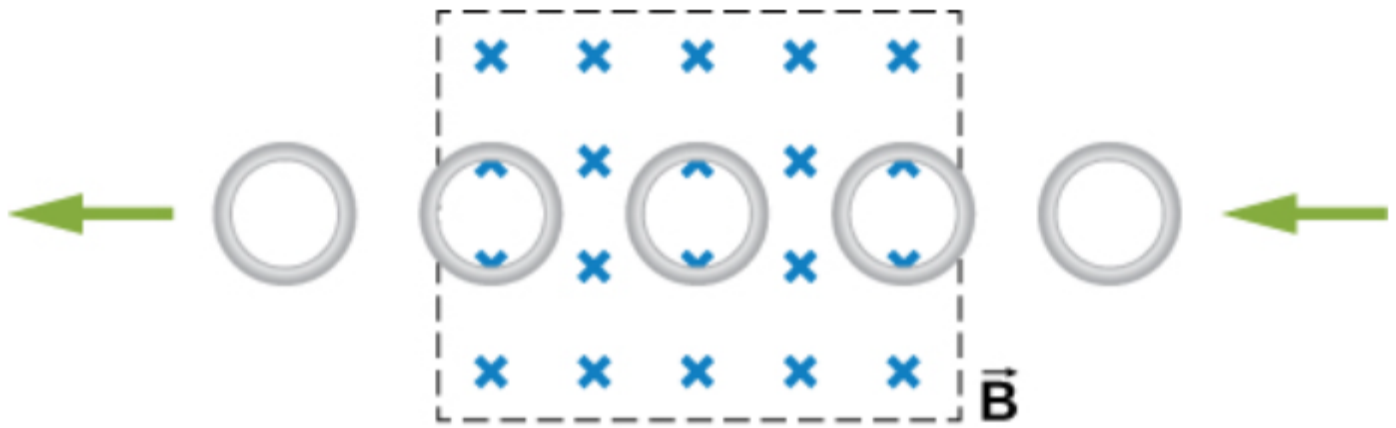

You bring the magnet toward the conductive loop. What happens as the magnet approaches the loop

- ☐ A current is induced CCW
- ☐ An alternating current is induced
- ☐ A current is induced CW
- ☐ nothing happens.

Question 2 15 pts

As the conductive loop enters the magnetic field (from the right). What happens

- ☐ alternating current is induced
- ☐ current is induced and is CW
- ☐ There is no current flowing
- ☐ current is induced and is CCW

Question 3 15 pts

Now the loop is entirely inside the magnetic field (no change in field lines through the loop) .

- ☐ There is a CCW induced current
- ☐ There is an alternating current induced
- ☐ There is no current induced

☐

There is a CW induced current

⋮

Question 4 20 pts

As the loop leaves the magnetic field region (left).

☐

the induced current is CCW

☐

The current induced is alternating

☐

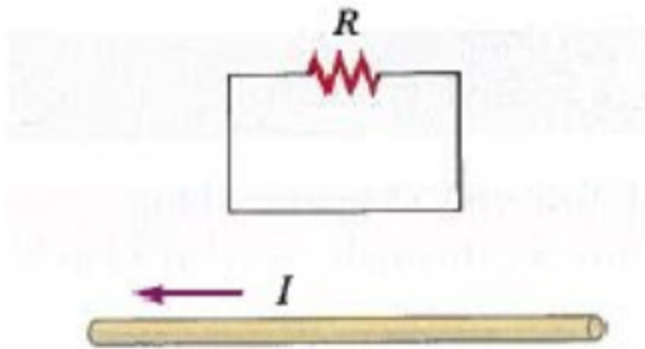

the induced current is CW

☐

The induced current is 0

⋮

Question 5 15 pts

- In the diagram above, the current I increases with time. What is the direction of the induced current in the resistor?
 - To the right
 - To the left
 - There is no current

We can discuss it in class. Use the right hand rule. Your thumb is the straight wire. So the magnetic field (increasing) produced by the wire is : inside the screen ? outside the screen?

the induced current in the circuit wants to create a magnetic field to fight the increase of the magnetic field from the wire.

☐

B

☐

A

☐

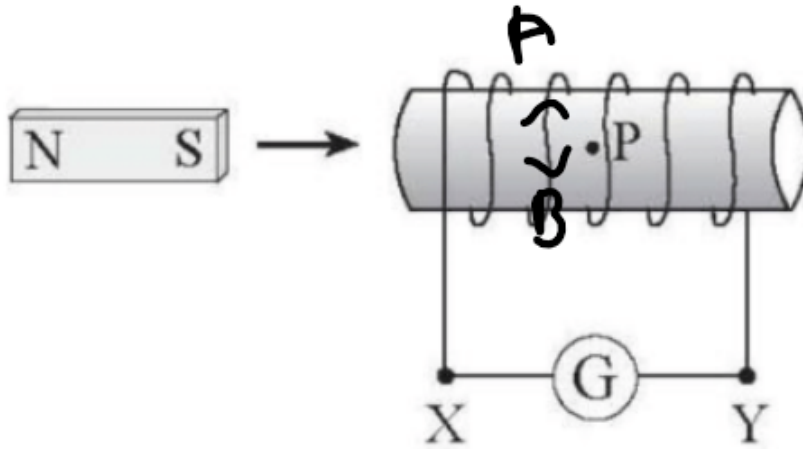

Can not be determined

☐

C

☐

Question 6 20 pts

The induced current is flowing

☐

toward A

☐

can not be determined

☐

toward B

☐

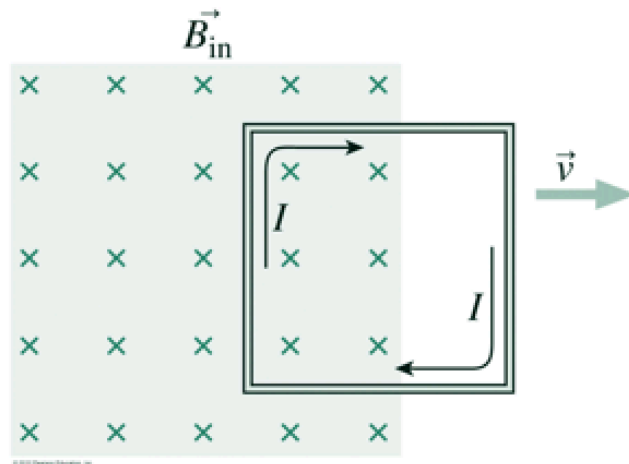

no induced current

☐

Question 7 3 pts

What will be the direction of the current in the loop when it first enters the field shown, coming into the field from the left side?

- A. Clockwise
- B. Counterclockwise

- ☐ Bazinka!
- ☐ CW
- ☐ CCW
- ☐ no induced current
